HERITAGE AT RISK

Since it was launched in 1998 our Buildings at Risk Register has been extremely successful in coordinating action to save some of the nation's most important structures from decay and destruction. As a result, scheduled monuments, registered parks and gardens, registered battlefields, protected wreck sites and conservation areas have all been added to what is now called the Heritage at Risk Register. This year, we undertook a pioneering 15% sample survey of England's 14,500 listed places of worship to help us understand the condition

of the thousands of designated churches, chapels, synagogues, mosques and temples and other faith buildings that are the spiritual focus for our communities. They face many different kinds of challenges and we need to help congregations ensure their future.

As the effects of the financial crisis become apparent, ensuring a sustainable future for England's heritage will be challenging. It is nevertheless clear that success will depend on a close partnership between public sector organisations, charities, communities and owners. At Croome Court in Worcestershire, for example, we are working with the National Trust and Natural England to conserve one of the country's most outstanding 18th century parkland landscapes and its listed buildings.

In the West Midlands a number of buildings have been on the Register since its inception, especially in urban and industrial areas. The economic downturn makes finding solutions for these particularly difficult as their potential to attract investment is low. In other cases, promised investment has been withdrawn – the Newman Brothers Coffin Furniture Works in Birmingham's Jewellery Quarter is an example of this. Withdrawal of support by Advantage West Midlands threatened the project, and the Birmingham Conservation Trust is now working hard to restructure the scheme.

Despite this, 2009 saw a reduction in buildings at risk being added to the Register. Among the 11 removed were the Cathedral Barn in Hereford, Weoley Castle in Birmingham and the Chillington Park dovecote. Repairs are currently underway on a further 8 buildings and we expect another 15 schemes to start within the year.

The number of conservation areas at risk in the West Midlands is now 51 out of a total of 613 surveyed. We already have four conservation area partnership schemes running in association with local authorities with two new schemes starting in Longton, Stoke-on-Trent and Newcastle-under-Lyme during 2010. While these schemes can tackle building repair, many of the changes that put conservation areas at risk relate to planning activities. As a result of public spending cuts, the Region is seeing a decline in the provision of specialist conservation advisers in local authorities. This does not bode well for the quality and timeliness of advice to owners and decision-makers and could have an impact on the number of conservation areas at risk.

Our partnerships with owners, local authorities, Natural England and charities have achieved notable success in tackling scheduled monuments at risk. Examples include the industrial site of Snailbeach and Hopton Castle, both in Shropshire, and Polesworth Abbey Gatehouse in Warwickshire. We now have management agreements in place for 125 at risk monuments, of which 96 are in partnership with Natural England. During the past year this has helped reduce the number of monuments at risk by 38, although many others face long-standing issues in terms of land management and agriculture.

Around 7% of the Region's 150 registered parks and gardens are at risk from changes of use, fragmented ownership, intensive farming and other pressures. Encouraging landowners to work together to conserve their landscapes is a challenge, particularly when this may be less financially beneficial than the current, inappropriate, management regimes.

Tim Johnston, Planning and Development Regional Director, West Midlands

Contact: Hayley McCafferty-David, Business Manager, English Heritage West Midlands Region, 8th Floor, The Axis, 10 Holliday Street, Birmingham B1 ITG. Telephone: 0121 625 6877 Fax: 0121 625 6821 Email: hayley.mccafferty-david@english-heritage.org.uk

ANGEL CROFT HOTEL, LICHFIELD

Occupying a prime location opposite the Cathedral, this fine red brick Georgian town house was built in 1750 and is listed grade II*. It has been on the Register for more than 10 years and today lies empty and in a very poor state of repair. The owners were keen to refurbish it as an extension to their existing hotel business but in the present economic climate they cannot risk the investment required. The property is now for sale again and so remains at very great risk of further deterioration, decay and vandalism.

LISTED BUILDINGS

- I in 32 (3.1%) grade I and II* listed buildings are at risk across the country. In the West Midlands this rises to 4.4% (120 sites).
- 11 sites were removed from the 2009 regional Register during the year, but 6 new sites were added.
- Since publication of the 1999 baseline Register 48.1% of the region's buildings at risk (91) have been removed from the regional Register as their futures have been secured, compared to the national figure of 50.7% (724).
- Nationally, £6.2m was offered to 76 sites on the Register during 2009/10. In the West Midlands we awarded grants totalling £312k to 10 sites.

CONSERVATION AREAS

- 272 local authorities (81%) have taken part in our national survey of conservation areas, 24 of which were in the West Midlands region.
- We now have information for 7,388 of England's 9,300 designated conservation areas, of which 613 are in the West Midlands.
- 549 (7.4%) of the conservation areas for which we have information are at risk, 51 (8.3%) of them in our region.

SCHEDULED MONUMENTS

- Approximately 1 in 6 (17.2%) of England's 19,731 scheduled monuments are at risk, compared with 17.4% (248 sites) in the West Midlands.
- The total at risk has reduced by 140 (4.0%) since 2009, 38 of which (13.3%) were in the West Midlands.
- Arable ploughing and unrestricted plant, scrub or tree growth account for nearly two thirds of sites at risk. Ploughing is a particularly serious problem in the West Midlands, where erosion of sites by cultivation is a major issue.
- Nationally, 82% of scheduled monuments at risk are in private ownership, rising to 89% in the West Midlands.
- Of the £450k offered to owners of scheduled monuments at risk in 2009/10, £6k was awarded to 2 sites our region.

REGISTERED PARKS AND GARDENS

- I in 16 of England's 1,606 registered parks and gardens are at risk, an increase from 6.0% (96) in 2009 to 6.2% (99) this year. In the West Midlands, 10 of our 150 sites are at risk (6.7%).
- Nationally, 5 sites have been added and 2 removed from the Register. One site in our region has been removed.

REGISTERED BATTLEFIELDS

- Of the 43 registered battlefields in England, 6 are at risk, I less than in 2009.
- None of the West Midlands' 6 registered battlefields are at risk.

PROTECTED SHIP WRECKS

• Of the 46 protected wreck sites around England's coast, 8 are considered to be at risk, a reduction of 1 on 2009.

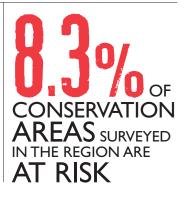

HOPTON CASTLE, SHROPSHIRE

After years of neglect this important medieval borderland castle was in imminent danger of collapse. English Heritage recently negotiated its transfer to a local charitable Trust, which will display it to the public once a $\pounds I$ million repair project, co-funded by English Heritage and the Heritage Lottery Fund, is complete.

CARING FOR PLACES OF WORSHIP

Places of worship make a huge contribution to our towns and villages. They sit at the heart of communities, dominating skylines and landscapes. They are the product of centuries of invested skill and philanthropy. Most remain as places of prayer and spirituality but others have acquired new social uses that benefit a much wider cross-section of urban and rural society.

Like all buildings, they require regular maintenance to keep them in good condition. They also need to adapt to the evolving needs of their congregations and the wider community. Responsibility for their care falls almost entirely on the shoulders of volunteers, and for many smaller congregations the burden can be heavy.

We have therefore undertaken a series of consultation events with congregations, user groups and local authorities to identify the biggest concerns of those who manage these very special places. Places of Worship are particularly close to the heart of local communities, but in practice it is often just a handful of dedicated individuals who maintain them. They face unique challenges, which are illustrated in an accompanying report.

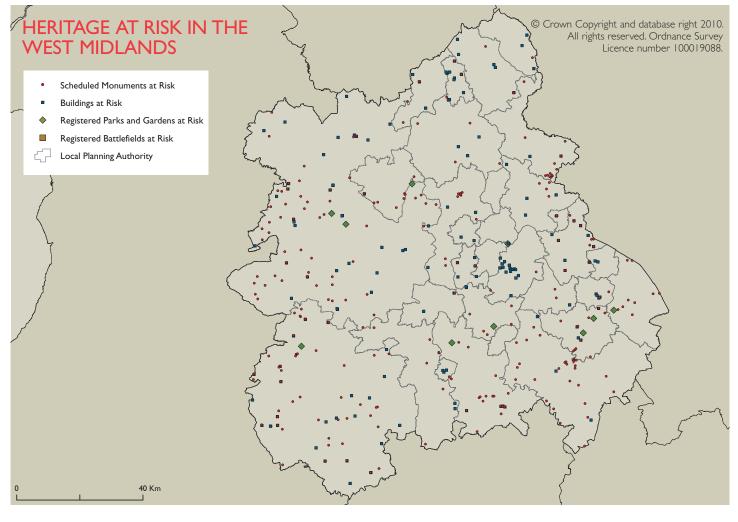

What we know

- 45% of all grade I buildings are places of worship.
- 85% of listed places of worship belong to the Church of England.
- Up to I in IO could be at risk from leaking roofs, faulty gutters or eroding stonework.
- 1,850 repair projects at 1,567 buildings have shared \pounds 171m of English Heritage and Heritage Lottery Fund grant aid since 2002/3.

What congregations want to understand better

- Why their building has been listed and what that means.
- How to get permission to make changes and find expert help.
- How to raise money for one-off projects and day-to-day maintenance.
- Who will look after their buildings in the future.

All of these are considered in our booklet *Caring for Places of Worship*, sent to every listed place of worship.

For more information, see www.english-heritage.org.uk/risk or contact your English Heritage regional office. Reducing the risks

English Heritage is committed to securing a year-on-year reduction in the number of heritage sites at risk. This will be challenging given the number of assets now on the register and the different kinds of risk they face. Each asset type and individual case will require its own approach and solution.

There are, however, some general approaches that are relevant to all assets at risk. Resolving cases requires working in close partnership with owners, local planning authorities and other relevant organisations and partners. Advice and understanding are essential. Historic Environment Records, maintained by local authorities, are repositories of information on local historic assets. They underpin the work of local authority historic environment services and can help improve the protection, conservation and management of heritage assets.

Maintenance of heritage assets is essential if they are not to become 'at risk', and to prevent those that are already at risk from decaying further and thereby escalating the cost of their repair and consolidation. Buildings, for instance, decay rapidly when left empty. Avoiding vacancy through short-term lets or schemes that provide protection through residential occupation are low-cost ways of maintaining buildings until permanent solutions can be found.

English Heritage provides on-line advice and guidance to local authorities, owners and managers of sites through the Historic Environment Local Management (HELM) website www.helm.org.uk.

LISTED BUILDINGS

English Heritage's role in securing the future of buildings at risk is primarily to provide practical advice, guidance and resources to local authorities and owners. Our involvement in cases is determined by the importance of the building and the complexity of the issues. We can help with analysis of the issues, investigation of the feasibility of options and brokering solutions. Although buildings at risk will continue to be a priority for English Heritage repair grants, grant-aid is limited in relation to demand. Grants from other public sources, notably the Heritage Lottery Fund, continue to be essential in helping secure the future of buildings at risk.

In very exceptional cases, English Heritage may acquire and repair a particularly important building at risk, where it is clear that the scale and complexity of problems are such that direct involvement is the best way of securing the building's long-term future. Local authorities have a primary role in protecting the historic environment. The creation of a local 'at risk' register is the first step in tackling neglected buildings in order to assess and monitor the scale of the problem and prioritise resources and action. Local authorities can also take action to secure the preservation of historic buildings through the use of statutory notices. Some councils have a successful track record, but generally these powers are under-used. It is essential that local authorities make best use of their powers to secure buildings at risk, to 'stop the rot' and prevent the costs escalating beyond the point where it is economic to repair.

To help local authorities make more frequent and timely use of their statutory powers, English Heritage runs a grant scheme to underwrite a significant proportion of the irrecoverable costs involved in serving Urgent Works and Repairs Notices.

Building preservation trusts can be the key to saving many buildings at risk. Some trusts cover geographical areas; others specialise in particular types of building or are formed to save just one building. Determined individuals and trusts have saved numerous buildings at risk, working in partnership with other organisations such as local and national amenity societies, including SAVE Britain's Heritage, the Society for the Protection of Ancient Buildings, The Victorian Society and the Georgian Group.

SCHEDULED MONUMENTS

Although a significant proportion of scheduled monuments remain at risk, in many cases the problems can be reduced by either small changes to land management or better-informed decision-making. This is reinforced by the success in reducing the number of monuments at risk since the release of the interim figures in 2008, which shows how the simple act of disseminating information and advice can go a long way towards improving conditions. English Heritage provides on-line advice to the owners and managers of sites via the Historic Environment Local Management website www.helm.org.uk; through its Historic Environment Field Advisers and through the network of local authority Historic Environment Countryside Advisers that we have co-sponsored with local authority partners.

While most owners and managers of scheduled monuments address their long-term care on a regular basis, some monuments do require significant resources to stabilise their condition, to carry out repairs, or to change the way in which the land on and around them is used. English Heritage therefore works closely with Natural England who deliver the Environmental Stewardship agri-environment scheme on behalf of Defra and who are active in helping develop management regimes which include scheduled monuments. We also help the Heritage Lottery Fund to identify important sites deserving grant-aid.

The English Heritage National Monuments Record and local authority Historic Environment Records have increased the information available to land managers and we are continuing to develop their services. A new Selected Heritage Inventory for Natural England (SHINE) will soon allow owners to view online information on scheduled monuments and other archaeological features on their holdings.

In all cases – whether for rural or urban monuments – close co-operation with owners and land managers is the key to making further progress.

REGISTERED PARKS AND GARDENS

Inclusion on the Register brings no additional statutory controls, but there is a presumption in favour of the conservation of all designated assets in the planning system. The Government's new Planning Policy Statement 5 *Planning for the Historic Environment* (PPS 5) and its supporting Practice Guide will help planning authorities to assess and mitigate the impact of development on our irreplaceable heritage of designed landscapes.

English Heritage can engage only with the proposals for change to the highest graded designed landscapes and where the impact on historic significance is greatest. We will continue to tackle the skills crisis facing historic parks and gardens through sector-wide initiatives.

English Heritage encourages the development of conservation management plans for registered historic parks and gardens, especially those in multiple ownership. We are also keen for bursars and estate teams to use management plans to help conserve important but fragile landscapes in the care of schools, hospitals, hotels and other institutional owners.

REGISTERED BATTLEFIELDS

As with registered parks and gardens, this designation brings no additional statutory controls, but there is a presumption in favour of conservation of registered battlefields in the new PPS 5. English Heritage will continue to work with owners to develop management plans for registered sites and, in appropriate cases, contribute towards the cost of management plans. We will develop positive landscape strategies with owners and partners such as Defra. In some circumstances, we may encourage the conversion from arable to pasture of especially sensitive locations to protect battlefield archaeology from the effects of ploughing and as part of a wider drive to prevent unauthorised or damaging metal-detecting.

English Heritage will also continue to encourage greater access to battlefields and improve their amenity value and visitors' appreciation of the impact these historic events had on our development as a nation.

Local authorities can help reduce the risk to battlefields by designating registered battlefields as conservation areas. This provides further protection and makes sure that registered battlefields are explicitly taken into account in Local Development Frameworks. Local authorities can also invite comments from the Battlefields Trust on planning applications affecting the setting of registered sites.

PROTECTED WRECK SITES

At the strategic level, the major sources of risk to designated wreck sites have now been identified. In terms of high-priority sites, practical requirements have also been identified in conservation management plans.

Risks to protected wreck sites can often be reduced through education, provision of marker buoys, or planning policies that take full account of their national importance. However, some sites require significant resources to stabilise their condition or to carry out detailed archaeological assessments of their conservation requirements. Although English Heritage has statutory power to allocate funds to promote the preservation and maintenance of protected wreck sites, its financial resources can solve only a small proportion of the problems.

In spite of the inherent difficulties with caring for this type of site, careful management must be maintained if we are to avoid the loss of wreck sites. It is therefore close co-operation between the owners of protected wreck sites (where known), authorised divers and all organisations charged with care for the marine and coastal environment, that will make the real difference to their long-term survival.

Practical advice on the management of historic wreck sites, whether at the coast-edge or under water, is available from English Heritage's Maritime Archaeology Team (maritime@english-heritage.org.uk) and from www.helm.org.uk.

CONSERVATION AREAS

The risks to conservation areas are difficult to address as they cover large areas of land and involve many different owners. Looking after them is thus a responsibility we all share – those of us who visit them to work or for enjoyment, those of us who own homes and businesses in them, those of us whose job it is to manage the spaces between the buildings and make decisions about their future.

Overall understanding of their character, development of a robust management regime and engagement by the public are therefore the keys to providing them with sustainable long-term futures. A conservation area is more likely to improve over time if the local authority commits itself to employing a dedicated conservation officer and to appointing an elected member as a heritage champion to promote the historic environment within the council. It also depends on members of the local community engaging either individually or through some form of conservation area advisory committee.

Armed with the information provided by the survey, we and our regional partners will have the evidence to direct resources and investment much more accurately towards those conservation areas at greatest risk. We will also want to target those with the greatest potential to improve the quality of life and economic prospects of people in the villages, towns and cities of which they are such crucially important components.

Publications and guidance

English Heritage has produced the following publications relating to heritage at risk, including:

- Buildings at Risk: a New Strategy (1998)
- Caring for Places of Worship 2010 (2010) a report on the condition of England's listed places of worship and the needs of the congregations
- Heritage at Risk: Conservation Areas (2009)
- Heritage at Risk 2010 national report and summaries for each of our nine regions: East Midlands, East of England, London, North East, North West, South East, South West, West Midlands, Yorkshire and the Humber
- Heritage at Risk Register 2010 detailed listings for each of our nine regions: East Midlands, East of England, London, North East, North West, South East, South West, West Midlands, Yorkshire and the Humber can be downloaded from our website or viewed as an interactive database: www.english-heritage.org.uk/risk
- Monuments at Risk (2008) summary of scheduled monuments at risk in each of our nine regions: East Midlands, East of England, London, North East, North West, South East, South West, West Midlands, Yorkshire and the Humber
- Protected Wreck Sites at Risk: A Risk Management Handbook (2007)
- The Monuments at Risk initiative 2003–08 (2010)

HERITAGE AT RISK ON THE WEB

To find out more about the Heritage 'at risk' programme visit **www.english-heritage.org.uk/risk** where you will find an interactive database providing detailed information on all heritage sites 'at risk' nationally.

For further information about the different classes of designated heritage assets, including listed buildings, conservation areas, scheduled monuments, registered parks and gardens, registered battlefields and protected wreck sites visit the Heritage Protection section of our website www.english-heritage.org.uk/heritageprotection

CONSERVATION POLICIES AND GUIDANCE

The following publications are among the numerous helpful guidance documents now available on our website: www.english-heritage.org.uk/publications or www.english-heritage.org.uk/helm

Caring for Places of Worship (2010) – a practical booklet for everyone involved in caring for England's listed places of worship

Constructive Conservation in Practice (2008)

Conservation Principles, Policies and Guidance for the Sustainable Management of the Historic Environment (2008)

Creativity and Care: New Works in English Cathedrals (2009)

Enabling Development and the Conservation of Significant Places (2008)

Farming the Historic Landscape: Caring for Archaeological sites on Arable Land (2004)

Farming the Historic Landscape: Caring for Archaeological sites in Grassland (2004)

Guidance on the Management of Conservation Areas (2006)

Guidance on Conservation Area Appraisals (2006)

Guidance Notes and Application Forms for Grants to Local Authorities:

– Grants to Local Authorities to Underwrite Urgent Works Notices (1998)

– Acquisition Grants to Local Authorities to Underwrite Repairs Notices (1998)

– Grants for Historic Buildings, Monuments and Designed Landscapes (2004)

Heritage at Risk: Conservation Areas (2009) – guidance for local authorities

Managing Local Authority Heritage Assets: Some Guiding Principles for Decision Makers (2003)

New Uses for Former Places of Worship (2010)

Options for the Disposal of Redundant Churches and Other Places of Worship (2010)

Paradise Preserved: An Introduction to the Assessment, Evaluation, Conservation and Management of Historic Cemeteries (2002)

Scheduled Monument Consent: a Guide for Owners and Occupiers (2009)

Shared Interest: Celebrating Investment in the Historic Environment (2006)

Stopping the Rot: a Step by Step Guide to Serving Urgent Works and Repairs Notices (1998)

The Disposal of Historic Buildings: Guidance Note for Government Departments and Non-Departmental Public Bodies (DCMS, 1999). A new version is being prepared

THE REGISTER Content and criteria

DESIGNATION

All the historic environment matters but there are some elements which warrant extra protection through the planning system. Since 1882, when the first Act protecting ancient monuments and archaeological remains was passed, government has been developing the designation system. Listing emerged from the post-blitz 1940s Planning Acts, and is now applied to about half a million buildings ranging from palaces to street lamps. Almost 20,000 archaeological sites are scheduled, which introduces tight management controls. Some 1,606 designed landscapes are registered, as are 43 battlefields, and 46 wreck sites are protected.

English Heritage, as the government's expert adviser, is responsible for making recommendations – but it is still the Secretary of State at the Department for Culture Media and Sport who makes the decisions on whether a site is designated. Understanding and appreciation develop constantly, which makes keeping the designation base up to date a never-ending challenge. While responding to threat-driven cases, we also seek to work strategically. Recent developments have seen a greater striving for openness and transparency in the process of designating a site, and better communication of what makes something special.

Conservation areas are designated locally by local planning authorities. They are areas of special architectural or historic interest the character or appearance of which it is desirable to preserve or enhance.

LISTED BUILDINGS Definition

A listed building is a building (or structure) that has been designated as being of 'special architectural or historic interest'. The older and rarer a building is, the more likely it is to be listed. Buildings less than 30 years old are listed only if they are of outstanding quality and under threat.

Listed buildings are graded I, II* and II. Grade I and II* are particularly important buildings of outstanding interest; together they amount to 8% of all listed buildings. The remaining 92% are of special interest and are listed grade II.

Entries on the statutory list of buildings of special architectural or historic interest may comprise a number of separate buildings. Formal residential terraces are the most obvious example. Entries on this register reflect how buildings are grouped and recorded on the statutory list. Structures can occasionally be both listed as buildings and scheduled as monuments.

Criteria for inclusion on this register

Buildings considered for inclusion on this register must be listed grade I or II*, (or grade II in London) or be a structural scheduled monument. Buildings are assessed for inclusion on the basis of condition and, where applicable, occupancy (or use). The condition of buildings on the register ranges from 'very bad' to 'poor', 'fair' and (occasionally) 'good'. The register also includes buildings that are vulnerable to becoming at risk because they are empty, under-used or face redundancy without a new use to secure their future.

Occupancy (or use) is noted as 'vacant', 'part occupied', 'occupied', or occasionally, 'unknown'; for many structural monuments, occupancy is not applicable.

Assessing vulnerability in the case of a building in fair condition necessarily involves judgement and discretion. A few buildings on the register are in good condition, having been repaired or mothballed, but a new use or owner is still to be secured.

Buildings are removed from the 'at risk' register when they are fully repaired/consolidated, their future secured, and where appropriate, occupied.

Priority for action

Once a building is identified as 'at risk' or vulnerable and included on the register, priority for action is assessed on a scale of A to F, where 'A' is the highest priority for a building which is deteriorating rapidly with no solution to secure its future, and 'F' is the lowest priority where a repair scheme is in progress and an end use has been secured.

SCHEDULED MONUMENTS Definition

Scheduled monuments include archaeological sites and landscapes, and 19,731 examples have been designated because of their national importance. Scheduled monuments are not graded, and most have limited potential for beneficial use. They cover human activity from the prehistoric era, such as burial mounds, to 20th century military and industrial remains. For the millennia before written history, scheduled monuments are the only testament to innumerable generations of people of whom there is no other record.

The later 20th century saw unprecedented changes to the landscape. As a result, types of historic site that once were commonplace began to become rare. Those that survive often represent just small islands of what once characterised broad sweeps of our towns and countryside. Although protected by law, scheduled monuments are still at risk from a wide range of processes. In particular, they can frequently be exposed to intense pressures beyond the reach of the planning system. These include damage from cultivation, forestry and – often most seriously of all – wholly natural processes such as scrub growth, animal burrowing and erosion.

Criteria for inclusion on this register

Scheduled monuments included on this register have been identified as being 'at risk' because of their condition and vulnerability, the trend in their condition, and their likely future vulnerability. A site's condition is expressed in terms of the scale and severity of adverse effects on it, ranging from those with 'extensive significant problems' to others that have only 'minor localised problems'.

Monuments are removed from the register once sufficient progress has been made to address identified issues, demonstrating a significant reduction in the level of risk.

REGISTERED PARKS AND GARDENS Definition

There are 1,606 designed landscapes on the current English Heritage Register of Historic Parks and Gardens of Special Historic Interest. These registered landscapes are graded I, II* or II, and include private gardens, public parks and other green spaces, country estates and cemeteries. They are valued for their design, diversity and historical importance and in contrast to the number of listed buildings and scheduled monuments, registered parks and gardens is a very small group of assets.

Inclusion on the English Heritage Register of Historic Parks and Gardens brings no additional statutory controls, but there is a presumption in favour of conservation of the designated site. Local authorities are required to consult English Heritage on applications affecting sites registered as grade I or II* and the Garden History Society on sites of all grades.

Criteria for inclusion on this register

The identification of registered parks and gardens at risk begins with an appraisal of the condition and vulnerability of each registered landscape. Steps being taken by owners to address problems are also taken into consideration.

Landscapes assessed as being 'at risk' are typically affected by development and neglect. They have frequently been altered by development or are faced with major change. The original function of these landscapes has often changed; and divided ownership often results in the loss of the cohesive conservation of the historic designs.

Landscapes are removed from the register once plans are put in place to address issues and positive progress is being made.

REGISTERED BATTLEFIELDS Definition

English Heritage's Register of Historic Battlefields has identified 43 nationally significant sites ranging in date from 991 to 1685. These are places where people risked their lives fighting for a cause and where history was made. The outcome of these battles was influenced by where they were fought and traces of the events will have been left across the landscape. Battlefields are cherished for many reasons, as a commemoration of the event and those who died, as a resource for understanding the course of the battle, and for the light they can shed on the times in which the battle was fought. They are vulnerable to insensitive development and to poorly managed investigation such as large-scale metal-detecting. While this designation introduces no additional statutory controls, one of its primary objectives is to encourage policies and other mechanisms that ensure that change and development affecting battlefields are sensitive and appropriate.

Criteria for inclusion on this register

Battlefields deemed to be 'at risk' of loss of historic significance are included on this register. The identified risks and threats come from development pressure – for example, because they lie on urban fringes or are subject to development pressures within the site; arable cultivation, and unregulated metal-detecting. One major impact or a combination of several factors can be enough to raise the risk at a particular site.

Battlefields are removed from the register when either actual damaging activities are reversed or managed, or threats recede due to effective management planning.

PROTECTED WRECK SITES Definition

England's 46 protected wreck sites represent a tiny proportion of the 32,476 pre-1945 wrecks and recorded casualties that are known to lie in the territorial sea. Wreck sites can be of importance for different reasons: the distinctive design or construction of a ship, the story it can tell about its past, its association with notable people or events, its cargo, flora and fauna or its role as a focus for the local community. The Protection of Wrecks Act 1973 empowers the appropriate Secretary of State to designate a restricted area around a vessel to protect it or its contents from unauthorised interference.

Local authorities are able to react to foreshore infrastructure projects through the planning process, thereby securing the preservation of important remains in this intertidal zone.

Criteria for inclusion on this register

English Heritage has audited all designated wreck sites to identify those most at risk based on their current condition, vulnerability and the way they are being managed.

Wrecks are vulnerable to both environmental and human impacts. Risks that contribute to the inclusion on the register range from unauthorised access to erosion and fishing damage.

What needs to be done to ensure that the significance of the sites is maintained is identified as part of the monitoring process. In spite of the inherent difficulties in caring for this type of site, careful management must be maintained.

Wrecks are removed from the register once an appropriate management and monitoring regime is operational.

CONSERVATION AREAS Definition

Conservation areas are designated by local authorities and are areas of special architectural or historic interest the character or appearance of which it is desirable to preserve or enhance. For more than 40 years conservation areas have proved a highly effective mechanism for managing change on an area-wide basis. There are currently some 9,300 conservation areas in England including town and city centres, suburbs, industrial areas, rural landscapes, cemeteries and residential areas. They form the historic backcloth to national and local life and are a crucial component of local identity and community cohesion.

Criteria for inclusion on this register

English Heritage has asked every local authority in England to complete a survey of its conservation areas, highlighting current condition, threats and trends, identifying those that are expected to deteriorate, or are in very bad or poor condition and are not expected to change significantly in the next three years, being defined as at risk.

The methodology for assessing conservation areas at risk has been refined since the first survey in 2008/2009. The information collated this year provides a more detailed assessment of each conservation area and an overall category for condition, vulnerability and trend is included for each conservation area on this register. Conservation areas identified as 'at risk' last year, but not reassessed using the revised methodology, are included on the register but with more limited information.

Conservation areas are removed from the register once issues have been identified, plans put in place to address them and positive progress is being made.

Key to the entries

This register includes the following heritage assets at risk:

- grade I, II* and II listed buildings and structural scheduled monuments
- scheduled monuments
- registered parks and gardens
- registered battlefields (where applicable)
- protected wreck sites (where applicable)
- conservation areas

ORDER

Entries are grouped and ordered alphabetically first by county or unitary authority, and then by local planning authority (unitary authority/national park/district or borough).

Asset types are grouped within the relevant planning authority in the following order:

- listed buildings and structural scheduled monuments
- scheduled monuments
- registered parks and gardens
- registered battlefields
- protected wreck sites (listed at the end of the county or unitary authority off which they are located)
- conservation areas

Within each asset type, sites are ordered alphabetically by parish, locality, street and site name.

DESIGNATION

The principal designation is noted for each entry, and includes:

- Listed Building (LB) grade I, II* or II
- Scheduled Monument (SM)
- Registered Park and Garden (RPG) grade I, II* or II
- Registered Battlefield
- Protected Wreck Site
- Conservation Area (CA)

Other designations that apply to buildings at risk and registered parks and gardens at risk, including their location within a World Heritage Site (WHS), are also noted where applicable.

The monument number is noted for scheduled monuments.

CONDITION

For buildings at risk, condition is graded as: 'very bad', 'poor', 'fair' and 'good'.

For sites that cover areas (scheduled monuments, registered parks and gardens and protected wreck sites) one overall condition category is recorded. The category may relate only to the part of the site or monument that is at risk and not the whole site:

- extensive significant problems
- generally unsatisfactory with major localised problems
- generally satisfactory but with significant localised problems
- generally satisfactory but with minor localised problems
- optimal
- unknown (is noted for a number of scheduled monuments that are below-ground and where their condition cannot be established).

For conservation areas, condition is categorised as: 'very bad', 'poor', 'fair' and 'optimal'.

OCCUPANCY

For buildings that can be occupied or have a use, the main vulnerability is vacancy, or under-use. Occupancy (or use) is noted as follows:

- vacant
- part occupied
- occupied
- unknown
- not applicable

VULNERABILITY

Principal vulnerability is noted for scheduled monuments and may relate only to the part of the monument which is at risk, and include:

- animal burrowing
- arable ploughing
- coastal erosion
- collapse
- deterioration in need of management
- scrub / tree growth
- visitor erosion.

For registered parks and gardens, protected wreck sites and conservation areas, vulnerability is noted as high, medium or low.

PRIORITY

For buildings at risk, the following priority categories are used as an indication of trend and as a means of prioritising action:

- A Immediate risk of further rapid deterioration or loss of fabric; no solution agreed.
- **B** Immediate risk of further rapid deterioration or loss of fabric; solution agreed but not yet implemented.
- C Slow decay; no solution agreed.
- D Slow decay; solution agreed but not yet implemented.
- E Under repair or in fair to good repair, but no user identified; or under threat of vacancy with no obvious new user (applicable only to buildings capable of beneficial use).
- F Repair scheme in progress and (where applicable) end use or user identified; functionally redundant buildings with new use agreed but not yet implemented.

If the priority category has changed since the 2009 register, the previous category is given in brackets.

TREND

Trend for scheduled monuments, registered parks and gardens, registered battlefields and protected wreck sites may relate only to the part of the site that is at risk and is categorised as:

- declining
- stable
- improving
- unknown

For conservation areas trend is categorised as:

- expected to deteriorate significantly
- expected to deteriorate
- deteriorating
- unknown
- no significant change expected
- expected to show some improvement

OWNERSHIP

A principal ownership category is given for each entry, although many scheduled monuments, registered parks and gardens, and registered battlefields are in divided ownership. For registered parks and gardens, single or multiple ownership is noted.

CONTACT

This is the member of the English Heritage regional team who acts as a first point of contact for the case, and to whom enquiries should be addressed.

For conservation areas, the contact is the conservation/planning officer at the relevant local planning authority (indicated by 'LA' on the register).

We are not in any sense agents for the owners of the sites included, but we will endeavour to put people in touch with them where appropriate.

Remains of tower keep from C13 castle. Rapidly eroding with rampant ivy cover and mortar disintegrating. Survey

and condition report commissioned by English Heritage some years ago as basis for a programme of repair works. Owner investigating possibility of enabling development as means of raising funds for repair, but no progress as yet. Urgent need to review management regime as condition is deteriorating.

Contact: Bill Klemperer 0121 625 6847

NUNEATON AND BEDWORTH

| ITE NAME: | Park Farmhouse, Arbury Park, Nuneaton |
|--------------|---|
| DESIGNATION: | Listed Building Grade II* |
| CONDITION: | Very bad |
| DCCUPANCY: | Vacant |
| RIORITY: | A (A) |
| OWNERSHIP: | Private |
| | |

Late C15 farmhouse with C16 and C17 alterations, to the north of Arbury Park. In very bad condition and deteriorating rapidly. Following building survey, urgent works have been carried out to support and protect structure while owners consider scheme for future use. Discussions with Arbury Estate to formulate strategy for all historic buildings on estate.

Contact: Nick Molyneux 0121 625 6857

PRIORITY (FOR BUILDINGS)

A Immediate risk of further rapid deterioration or loss of fabric; no solution agreed.
 B Immediate risk of further rapid deterioration or loss of fabric; solution agreed but not yet implemented.
 C Concentration

C Slow decay; no solution agreed.

D Slow decay; solution agreed but not yet implemented.

E Under repair or in fair to good repair, but no user identified; or under threat of vacancy with no obvious new user (applicable only to buildings capable of beneficial use).

F Repair scheme in progress and (where applicable) end use or user identified; functionally redundant buildings with new use agreed but not yet implemented.

NOTE: If the priority category has changed since the 2009 register, the previous category is given in brackets.

The Tea House, SITE NAME: Arbury Park, Nuneaton DESIGNATION: Listed Building Grade II*, RPG II* CONDITION: Very bad OCCUPANCY: Vacant PRIORITY: A (A) OWNERSHIP: Private

Mid C18 summerhouse located circa 500m east-north-east of Arbury Hall. The Tea House is situated on the north-east shore of a small lake on the eastern edge of the CI8 park. In a very bad state of repair (the dome has collapsed), and continues to deteriorate rapidly. Action needed urgently to halt decay. Discussions with Arbury Estate to formulate strategy for all historic buildings on estate.
